Roz Ho

Global Head, Print Software
HP Inc.

Roz Ho is the Global Head of Software for Print at HP. She is leading a team that is responsible for integrating and modernizing all firmware, software, and cloud computing platforms and systems from across the organization. The team will be responsible for all software development, building everything from applications to firmware that enable our printers and the print experience supporting new business models.

She has extensive general management and engineering management experience leading large global cross-functional teams including engineering, product management, marketing, and sales. With more than 25 years of experience in the technology industry, Ms. Ho holds numerous patents in software and hardware innovations. She was inducted to the Women in Technology Hall of Fame in 2018.

Prior to joining HP, Roz was the Senior Vice President and General Manager of the Consumer and Metadata Business Units at TiVo. Before TiVo, she served as Vice President and Head of Product Management and Engineering for TV Platforms at Ericsson Media Business Group, where she was responsible for the product strategy, roadmap and business models, and for managing a development team to deliver innovative products that addressed the fast-evolving consumer and business trends in the TV and video market.

Roz spent over two decades at Microsoft and held several key roles there, including engineering roles in Microsoft Office, General Manager of the Macintosh Business Unit, and Corporate Vice President of Premium Mobile Experiences. Among other assignments there, she worked on PowerPoint, and eventually led the project in shipping best-of-breed releases with innovative features used by more than a billion customers worldwide.

As a champion for women in technology, Roz has been involved in organizations dedicated to increasing the impact of women on all aspects of technology and has spoken at numerous conferences. She was featured in a documentary exploring the impact of gender in technology that premiered at the Tribeca Film Festival. She has also served on boards of non-profits focusing on helping young people reach their potential. Roz has funded and participated in several scientific expeditions that aims to understand and

preserve vanishing cultures and languages around the world. In her spare time, she loves to ski the steep and deep and travel to remote locations all over the globe with her family.
